

Cost-Effective and Efficient Warehouse Management for Small and Medium-Sized Companies

platbricks® Warehouse Management System Basic

Initial Situation and Challenges

The need to move from the analog to the digital world is increasing daily. The drivers for this development are diverse and unavoidable and may include:

- just-in-time manufacturing and delivery
- the impact of the COVID 19 pandemic
- the ongoing trends in e-commerce
- the cost pressure of international competition
- the shortage of skilled workers
- the worldwide but decentralized network
- the tracking without blind spots
- the importance of the ecological footprint

Particularly, small and medium-sized companies face the increased challenge of countering these drivers to remain globally competitive. Therefore, it is more important than ever to respond flexibly to these new requirements and offer added value to customers through speed and reliability. An essential factor in this is the digitization of analog logistics processes.

Your Advantages

- Smart management of all operational processes through the use of Any Device
- Optional use of resources in the process
- Higher customer satisfaction through the digital exchange of logistical data
- Inventory transparency for your entire article assortment
- Paperless processes in the warehouse through the use of intuitive mobile apps
- Shorter lead times with the help of end-to-end digital processes
- Simple order tracking in the control center

platbricks® WMS Basic – Our Standard Solution for Your Warehouse Management

Driven by these challenges, we have developed with our platbricks® Warehouse Management System Basic an efficient and straightforward standard solution. platbricks® enables you to step into the digital world cost-efficient and via Plug & Play. All processes - from goods receipt to inventory management and goods issued - are made available to you digitally in a control center and on mobile devices.

The control center offers all necessary functionalities to monitor and successfully control all processes. The basic dashboard provides an overview of the current key figures in real-time. Inventory management allows you to control and manage your stocks fully. The automated inventory at the push of a button also allows you to save time and personnel resources in the future or to use them elsewhere.

Our solution's „any-device“ approach offers the possibility to use all mobile devices (Android, iOS, Windows) within the scope of your logistical processes, e.g., for a goods receipt posting. Devices already in use can thus continue to be used and flexibly adapted depending on the place of use. The combination of the control station and mobile processes of the platbricks® WMS Basic offers the optimal basis to take the first steps into digitalization and meet the challenges on the market.

Core Functions of the platbricks® WMS Basic

- Intuitive user management incl. role and rights management
- Master data management of storage areas and articles
- Basic dashboard with all relevant key figures in real-time
- Inventory management for control and administration of stock
- Booking of goods receipt and goods issue processes (also via mobile devices)
- Mobile execution of picking processes
- Inventory & replenishment processes at the push of a button

Why platbricks® WMS Basic

- Easy set-up of the platbricks® WMS solution via Plug & Play
- Cost-effective standard solution
- High degree of user-friendliness
- Scalability through the use of cloud technology
- Secure storage of your data according to the German Data Protection Act (DSGVO) in the MS Azure Cloud
